Data in Focus: Gold Prices

Spot Gold Bullion (US\$/oz.)

Gold prices are up over 50% YTD. While stocks are “*risk*” assets, gold historically trades as a “*safe-haven*” that appreciates in periods of uncertainty. A key driver has been foreign central banks increasing their gold reserves, diversifying away from the U.S. dollar and U.S. Treasuries.

Index Blends: Stock/Bond				
80%/20%: Global Equity (MSCI All Ctry World) / U.S. Investment Grade Bond (Bloomberg U.S. Agg)		6.6	16.3	14.5
60%/40%: Global Equity (MSCI All Ctry World) / U.S. Investment Grade Bond (Bloomberg U.S. Agg)		5.4	13.7	11.1
40%/60%: Global Equity (MSCI All Ctry World) / U.S. Investment Grade Bond (Bloomberg U.S. Agg)		4.3	11.2	7.7
20%/80%: Global Equity (MSCI All Ctry World) / U.S. Investment Grade Bond (Bloomberg U.S. Agg)		3.2	8.7	4.5
Data as of 9/30/2025				

Source: Morningstar, and blended benchmark returns are based on monthly rebalancing.

Q3's tech leadership was denoted prominently by the NASDAQ 100, but even more so by the MSCI EM index which benefited from a sharp rally in Chinese tech stocks – e.g., Alibaba (BABA), Tencent (TCEHY), Xiaomi (XIACF), and others.

Economy

Tariffs & Trade

Average tariff rate on U.S. goods imports for consumption

Duties collected / value of total goods imports for consumption, 1900 - 2024

Not reflected in this chart are the significant escalation of threats over recent days between the U.S. and China, with President Trump announcing an additional 100% tariff on Chinese imports on Oct. 10.

Source: U.S. Census Bureau, U.S. Department of Treasury, U.S. International Trade Commission, J.P. Morgan Asset Management.
For illustrative purposes only. The estimated weighted average statutory U.S. tariff rate includes all tariffs that are currently in effect, not announced. Imports for consumption: goods brought into a country for direct use or sale in the domestic market. *Figures are based on 2024 import levels and assume no change in demand due to tariff increases. Tariff revenue shown are figures from the Monthly Treasury Statement. Import figures included in the table are from the U.S. Census Bureau. Estimates, projections and other forward-looking statements are based upon current beliefs and expectations. They are for illustrative purposes only and serve as an indication of what may occur. Given the inherent uncertainties and risks associated with forecasts, projections or other forward-looking statements, actual events, results or performance may differ materially from those reflected or contemplated.

Tariffs & Trade

U.S. Trade in Good: Balance with top trading partners 2024

As we previously emphasized, the trade deal with China announced by President Trump with much fanfare last May was really just a temporary pause. That temporary truce unraveled over the last few days when China imposed some new export approval requirements, which led to an exchange of threats. And global investment markets did not react well.

Economy

Federal Funds Rate

Federal funds rate expectations

FOMC and market expectations for the federal funds rate

The FOMC cut the Fed Funds rate by ¼ point at its meeting in mid-Sept. Fed Chair Powell attributed “*the downside risk to employment*” as the primary factor supporting that rate cut. Two more FOMC meeting are scheduled within 2025 – on Oct. 28-29, and Dec. 9-10. Presently, interest rate futures are discounting high certainty for additional ¼ Fed Funds rate cuts at each of those meeting.

Source: Bloomberg, FactSet, Federal Reserve, J.P. Morgan Asset Management. Market expectations are based off of USD Overnight Index Swaps. *Long-run projections are the rates of growth, unemployment and inflation to which a policymaker expects the economy to converge over the next five to six years in absence of further shocks and under appropriate monetary policy. Forecasts, projections and other forward-looking statements are based upon current beliefs and expectations. They are for illustrative purposes only and serve as an indication of what may occur. Given the inherent uncertainties and risks associated with forecasts, projections or other forward-looking statements, actual events, results or performance may differ materially from those reflected or contemplated. Guide to the Markets – U.S. Data are as of September 30, 2025.

Economy

Real GDP Estimate – Atlanta Fed GDPNow

Evolution of Atlanta Fed GDPNow real GDP estimate for 2025: Q3
Quarterly percent change (SAAR)

As we've previously conveyed, very little color is offered regarding the Atlanta Fed GDPNow estimate, which is based on a mathematical model. We attempted to assess potential factors underlying the wide difference between the GDPNow estimate for Q3 vs. the Blue Chip consensus. This seems primarily due to some wider than usual divergences in data and an interruption of data, all compounded by the ongoing government shutdown.

Sources: Blue Chip Economic Indicators and Blue Chip Financial Forecasts

Note: The top (bottom) 10 average forecast is an average of the highest (lowest) 10 forecasts in the Blue Chip survey.

Economy

Unemployment Rate

The August unemployment rate was 4.3%, little changed over the last 12 months. A concern shared by Fed Chair Powell is that *"the recent pace of job creation appears to be running below the 'breakeven' rate needed to hold the unemployment rate constant."*

Equities

Sub-Asset Class Relative Performance

Equities

S&P 500 Annual Returns & Intra-Year Declines

S&P 500 intra-year declines vs. calendar year returns

Despite average intra-year drops of 14.1%, annual returns were positive in 34 of 45 years

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management.

Returns are based on price index only and do not include dividends. Intra-year drops refers to the largest peak-to-trough decline during the year. Returns shown are calendar year returns from 1980 to 2024, over which the average annual return was 10.6%. Past performance is no guarantee of future results. Guide to the Markets – U.S. Data are as of September 30, 2025.

Equities

S&P 500 Forward P/E Valuation History

Comparisons to the tech-led rally of the late-90s are increasingly common. Having lived through that, we can agree.

Source: Bloomberg, FactSet, Moody's, Refinitiv Datastream, Robert Shiller, Standard & Poor's, J.P. Morgan Asset Management. Forward P/E ratio is the most recent S&P 500 index price divided by consensus analyst estimates for earnings in the next 12 months, provided by IBES since March 1994 and FactSet since January 2022. Shiller's P/E uses trailing 10-years of inflation-adjusted earnings as reported by companies. Dividend yield is calculated as consensus estimates of dividends in the next 12 months, provided by FactSet, divided by the most recent S&P 500 index price. EY minus Baa yield is the forward earnings yield (the inverse of the forward P/E ratio) minus the Bloomberg U.S. corporate Baa yield since December 2008 and interpolated using the Moody's Baa seasoned corporate bond yield for values beforehand. Guide to the Markets - U.S. Data are as of September 30, 2025.

The Equities chart on this page will rotate through the year based on perceived relevance.

Fixed Income

Sub-Asset Class Relative Performance

Most notable for fixed income sub-asset class performance last quarter was the bounce exhibited by Muni bonds. Some additional catch-up for Muni's appears warranted, in our view, as the concerns regarding the potential impact of Federal funding cuts for states became excessive.
